

From a thesis to a valuation

Connect operating assumptions to cash flows, valuation ranges, and a margin of safety.

SAMPLE EDUCATIONAL MATERIAL - NOT A PUBLISHED CLUB REPORT

Start with the business

Explain the product, customers, revenue drivers, and competitive position in plain language.

Build scenarios

Model revenue, margins, capital expenditure, and working capital under base, upside, and downside assumptions.

Test the valuation

Use sensitivity analysis for the discount rate and terminal growth. Compare the result with appropriate market multiples.

Document the decision

Record the entry assumption, thesis risks, and evidence that would change your view. This is a template, not a security recommendation.

Educational framework. Virtual capital. Not investment advice.
